

On the web at www.soles2dance.com Customer support at: customerservice@soles2dance.com

Thank you for choosing Soles2dance. Here are instructions on how to affix and use our **SUEDE-M**, **SUEDE-XL**, or **SUEDE-LA** soles with 3M 300LSE industrial-strength adhesive backing.

Note: The suede soles in this kit are ideal for dancing on studio-quality, well-maintained wood floors. For all other floors, we recommend you consult our PRODUCT SELECTOR at www.soles2dance.com

I. Instructions

1. Clean the soles of your shoes with a steel or wire brush, or any other brush you have available.
2. Sitting on a chair, support one shoe with your thighs, shoe sole facing upward.
3. Without removing the liner (protective foil) of the adhesive backing, loosely place one of the stick-on soles, suede side up, onto the shoe sole and see if it is the correct one (left and right soles are different).
4. If the stick-on sole is too big, cut off the excess suede with a pair of good household scissors.
5. Peel back the toe-end of the liner of the adhesive backing, just half an inch or so, and ever so lightly stick the exposed adhesive of that toe end to the toe end of the shoe sole. Once the adhesive touches the shoe sole lightly, orient the remainder of the stick-on sole so that it is aligned with the shoe sole. Then gently push down on the tip of the toe end of the stick-on sole in order to attach it securely to the toe end of the shoe sole.
6. Slowly and carefully peel back more of the liner of the adhesive backing, while simultaneously rolling the stick-on sole onto the shoe sole. Do this at the same rate, at which the adhesive is being revealed as you peel back the liner.
7. Repeat Steps 3-6 for all remaining stick-on patches.
8. When all components are attached, put the shoes on and stand on a hard surface for a minute. Shift your weight around so that at least for a few seconds each stick-on patch gets to bear most or all of your weight.

II. Usage Recommendations

This section offers some useful tips that will help you make the most of your Soles2dance products. We assume that you already successfully affixed your stick-on suede patches to your shoes.

1. Bear in mind that suede soles work well only on well-maintained, studio-quality hardwood floors. Suede soles are terrible on pretty much all other floors, especially those of nightclubs or dance clubs where spilled drinks make the floor sticky. For those floors we recommend our friction-reducing products LOFRI-04 or LOFRI-DIY (see www.soles2dance.com). Under no circumstances should you use suede soles on abrasive surfaces such as concrete or asphalt – these surfaces will literally shred your suede soles within minutes. Instead, use our super-low-friction stick-on sole SULOFR1, also available at www.soles2dance.com
2. After dancing, use a wire brush to remove dirt from your suede soles. Be careful near the edges of the stick-on soles: vigorous brushing can detach the stick-on sole from the dance shoe.
3. **If suede patches partially detach during use**, you can glue them back on with Superglue, available at all hardware stores. Beware that any part of the stick-on sole that is super-glued to the shoe sole will bond permanently, that is, you may or may not be able to remove the stick-on sole at a later time, even if you try to peel it off forcefully.
